#### Abstract

A binary quadratic equation $y^{2}=6 x^{2}+1$ representing hyperbola is considered for finding its infinitely many non zero integral solutions.

KEY WORDS: Diophantine, quadratic, Binary

## INTRODUCTION:

The binary quadratic equation is of the form $y^{2}=D x^{2}+1$, where D is a non-square positive integer. A binary Diophantine equation is an equation relating integer quantities. The binary quadratic Diophantine equations gives us an unlimited field for research because of their variety This communication concerns with interesting binary quadratic equation $\mathbf{y}^{\mathbf{2}}=\mathbf{6} \mathbf{x}^{\mathbf{2}}+\mathbf{1}$ which is Representing a hyperbola, for finding out its various non zero integral solutions. Also, following are the few interesting relations among the solution are given.

## METHOD OF ANALYSIS:

Consider the equation,

$$
y^{2}=6 x^{2}+1
$$

Which is a Pellian equation, whose general solution $\left(\mathrm{x}_{\mathrm{n}}, \mathrm{y}_{\mathrm{n}}\right)$ is given by

$$
x_{n}=\frac{1}{2 \sqrt{6}} g_{n} \quad y_{n}=\frac{1}{2} f_{n}
$$

Where

$$
f_{n}=\left\{[5+2 \sqrt{6}]^{n+1}+[5-2 \sqrt{6}]^{n+1}\right\}
$$

$$
g_{n}=\left\{[5+2 \sqrt{6}]^{n+1}-[5-2 \sqrt{6}]^{n+1}\right\} \quad n=0,1,2,3, \ldots \ldots
$$

The relations satisfied with $\mathrm{x}_{\mathrm{n}}$ and $\mathrm{y}_{\mathrm{n}}$ are given by

$$
y_{n+2}-10 y_{n+1}+y_{n}=0 \quad \text { with } y_{0}=5 \quad \& \quad y_{1}=49
$$

similarly,
$\mathrm{x}_{\mathrm{n}+2}-10 \mathrm{x}_{\mathrm{n}+1}+\mathrm{x}_{\mathrm{n}}=0 \quad$ with $\mathrm{x}_{0}=2$ \& $\mathrm{x}_{1}=20$

| n | $\mathbf{x}_{\mathbf{n}}$ | $\boldsymbol{y}_{\boldsymbol{n}}$ |
| :---: | :---: | :---: |
| 0 | 2 | 5 |
| 1 | 20 | 49 |
| 2 | 198 | 485 |
| 3 | 1960 | 4801 |
| 4 | 19402 | 9505 |
| 5 | 192060 | 470449 |

A few intereting solutions among the solutions are as follows

1. $\mathrm{x}_{\mathrm{n}}$ is always even.
2. $y_{n}$ is always odd.
3. $y_{2 n} \equiv 0(\bmod 5)$.
4. $x_{2 n+1} \equiv 0(\bmod 20)$.
5. $2 y_{2 n+1}+2$ is a perfect square.
6. $\mathrm{x}_{\mathrm{n}+1}=5 \mathrm{x}_{\mathrm{n}}+2 \mathrm{y}_{\mathrm{n}}$
7. $x_{n+2}=49 x_{n}+20 y_{n}$
8. $y_{n+1}=5 y_{n}+12 x_{n}$
9. $5 \mathrm{x} n+1-2 \mathrm{y}_{\mathrm{n}+1}=\mathrm{x}_{\mathrm{n}}$
$10.5 y_{n+1}-2 x n+1=y n$
$11.5 \mathrm{x}_{\mathrm{n}}+2-20 \mathrm{y}_{\mathrm{n}+1}=5 \mathrm{x}_{\mathrm{n}}$
$12.49 \mathrm{y}_{\mathrm{n}+1}-12 \mathrm{x}_{\mathrm{n}+2}=5 \mathrm{y}_{\mathrm{n}}$
$13.49 \mathrm{x}_{\mathrm{n}}+2-20 \mathrm{y}_{\mathrm{n}+2}=\mathrm{x}_{\mathrm{n}}$

$$
\begin{aligned}
& 14.20 \mathrm{x}_{\mathrm{n}+1}-2 \mathrm{x}_{\mathrm{n}+1}=2 \mathrm{x}_{\mathrm{n}} \\
& 15.5 \mathrm{y}_{\mathrm{n}} \mathrm{y}_{\mathrm{n}+1}-12 \mathrm{x}_{\mathrm{n}} \mathrm{x}_{\mathrm{n}+2}=5 \mathrm{x}_{\mathrm{n}} \mathrm{y}_{\mathrm{n}} \\
& 16.49 \mathrm{x}_{\mathrm{n}} \mathrm{y}_{\mathrm{n}+1}-12 \mathrm{x}_{\mathrm{n}} \mathrm{x}_{\mathrm{n}+2}=5 \mathrm{x}_{\mathrm{n}} \mathrm{y}_{\mathrm{n}} \\
& 17 . \mathrm{x}_{\mathrm{n}} \mathrm{y}_{\mathrm{n}+1}-\mathrm{y}_{\mathrm{n}} \mathrm{x}_{\mathrm{n}+1}=12 \mathrm{x}_{\mathrm{n}}^{2}-2 \mathrm{y}_{\mathrm{n}}^{2} \\
& 18 . .5 \mathrm{y}_{\mathrm{n}+2}-49 \mathrm{y}_{\mathrm{n}+1}=12 \mathrm{x}_{\mathrm{n}} \\
& 19 . \mathrm{y}_{\mathrm{n}+2}=49 \mathrm{y}_{\mathrm{n}}+120 \mathrm{x}_{\mathrm{n}} \\
& 20 . \mathrm{x}_{\mathrm{n}} \mathrm{y}_{\mathrm{n}+2}-\mathrm{y}_{\mathrm{n}} \mathrm{x}_{\mathrm{n}+2}=10 \mathrm{x}_{\mathrm{n}}^{2}-20 \mathrm{y}_{\mathrm{n}}^{2} \\
& 21.120 \mathrm{x}_{\mathrm{n}} \mathrm{y}_{\mathrm{n}+1}-12 \mathrm{x}_{\mathrm{n}} \mathrm{y}_{\mathrm{n}+2}=12 \mathrm{x}_{\mathrm{n}} \mathrm{y}_{\mathrm{n}} \\
& 22 . \mathrm{y}_{3 \mathrm{n}+2}+3 \mathrm{y}_{\mathrm{n}}=2 \mathrm{y}_{\mathrm{n}}\left(\mathrm{y}_{2 \mathrm{n}+1}+1\right) \\
& 23 . \mathrm{y}_{\mathrm{n}} \mathrm{x}_{\mathrm{n}+2}-4 \mathrm{y}_{\mathrm{n}} \mathrm{y}_{\mathrm{n}+1}=\mathrm{x}_{\mathrm{n}} \mathrm{y}_{\mathrm{n}}
\end{aligned}
$$

## CONCLUSION:

In the paper, I have presented infinitely many integer solutions for the equation $y^{2}=6 x^{2}+1$.As the Binary quadratic Diophantine equation have variety of choices, one may search for the other Diophantine equations and find out their integer solutions along with suitable properties.
